

Bar Code Inventory

Control your database with a physical inventory

The annual **physical inventory** of assets is mandatory for your company. To limit its realization time and guarantee a trust worthy result, it will require a **precise and pragmatic organization**.

To assist you with this task, we have developed modules allowing you to undergo your physical inventory with the help of barcodes.

You will be able to identify your equipment and their geographical locations with barcodes labels and launch an annual or several inventories each year, whether partial or complete to check and update your [ClariLog - Asset View](#).

With a barcode ID generated by ClariLog Asset View or previously existing, the label printing module, compatible with a [Brother P-Touch](#) or [CAB MACH4](#) printer will allow you to personalize your labels (logo, barcode, and additional date) in order to identify your assets.

Once the physical inventory is done, the inventory management of [ClariLog - Asset View](#) offers a report of what has been found or not, what is new, what has been moved, so that you can update your database.

The compatible reader: [Opticon OPN2001](#), offers two modes: data collector (barcode) to realize the inventory and the hand held scanner to search elements on the [ClariLog - Asset View](#) database.

In addition to the the network inventory functionalities, the barcode inventory guarantees a perfectly up to date inventory.

Benefits

- Physical control of your network inventory
