

Furniture management

Share your asset solution and capitalized information with your Corporate Service Department

Your IT Asset Management solution ClariLog - Asset View, allows you to centralize numerous information that could be useful for other departments: organization chart, users, subcontractors, contracts etc.

To make your investment profitable, you can extend its utilization scope to furniture management

As the administrator of ClariLog - Asset View, you can **restrict this additional access** to functionalities useful to manage furniture without granting access to functionalities falling under your responsibility.

Your colleague will have **an efficient solution, easy to use and set, in order to manage** non IT and non-telephony assets based on a reference frame built from user directory, or management rules etc.

Like the IT assets, furniture management **includes administrative and financial aspects** in order to get the same type of information and reports :

- Location, Hierarchical and User affectation
- Alerts on warranties and contract expiration dates
- Subscription management
- Cost, accounting, budget line
- TCO
- Incidents and maintenance
- Etc.

Benefits

- Infrastructure's data centralization of the same application
- Share the same reference frame with other departments
- Total control on a user's workspace

Main Features

- Manage furniture: office cabinet, desk, boards, chairs and miscellaneous elements
- Administrative, financial and accounting information
- *Manage life cycle*

Prerequisites

ClariLog Asset View for Data base constitution
