

Remote Installer

Remotely distribute your application with an automatic deployment of your MSI packages

Among your many daily tasks, the **deployment of your new applications** can take a considerable amount of time, especially if it concerns all or most of the users of your company.

To help you **save precious time** that you could consecrate to other tasks, we have developed ClariLog - Remote Installer.

Without any deployment of agent using the same remote technology as the network inventory Fast Inventory, this tool will **automate the remote installation of MSI packages** on your client workstations.

In link with your asset management database ClariLog - Asset View, you will easily access the target workstations according to:

- Geographical location
- Department management to whom the workstations are attached.
- Presence or absence of the software to be deployed.

This module also includes a few functions of:

- **Monitoring** to keep an eye on the on-going services or processes of a workstation before deployment,
- **Power management** to remotely start a workstation with Wake-On-Lan technology.

Benefits

- Time savings in software deployments

Main features

- MSI packages deployment
- Smart selection according to asset management

Prerequisites

ClariLog - Asset View for database constitution
